

SINGLE PIECE BULK BIN BLANK AND CONTAINER

ABSTRACT OF THE DISCLOSURE

The present invention is directed to a divided bulk bin container and blank. In
5 accordance with the present invention, a single sheet of foldable material is cut and scored
to define container blank. The blank includes a pair of opposed first side panels and a pair
of a opposed second side panels coupled with the first side panels. An outer bottom panel
is connected with said first side panel and an inner bottom panel is connected with said
second side panel. Also, a first divider panel is connected with said outer bottom panel
10 and a second divider panel is connected with said inner bottom panel. Further, a divider
slot is formed in said inner bottom panel and said second divider panel. The nature of the
divider slot is such that the width of said divider slot is at least twice the thickness of the
first divider panel.
